Introduction

Welcome to IOTA20, a new token that opens up a mouth-watering opportunity for astute coin seekers searching for the next gem. We're simplifying the original IOTA and providing an easier user experience with tangible staking rewards.

We embrace the task of learning from past mistakes of the original IOTA and aim to elevate the benefits of owning the token. IOTA20 is specially designed to cater to the evolving needs of the 2023 crypto community.

Ride The New Wave With IOTA20

Within the ever-evolving landscape of cryptocurrencies, IOTA20 shines as an exceptional choice in the current token creation landscape, promising significant upside potential for people who may have missed the 2017 pump of the original IOTA token. Our token has been thoughtfully crafted on the Ethereum network to offer a seamless way to get involved, empowering you to capitalize on the opportunity.

Improving The Original IOTA Token

Learning from the experiences of the original IOTA token, we are committed to addressing past shortcomings. Our team has analyzed community feedback and identified areas for improvement, with a particular focus on enhancing the user experience and fostering a vibrant, engaged community through clear communication. IOTA was criticized for being too complicated and centralized initially, had concerns about security vulnerabilities, struggled with a complex wallet and user experience, and lacked community transparency. We believe launching on a DEX on Ethereum solves most of these issues.

Staking Made Simple On Ethereum

Since IOTA20 is built on Ethereum, it inherits the most widely used blockchain's major strengths of true decentralization, tested security, and ease of use. IOTA20 brings staking into the equation and has been meticulously tailored to cater to the investment needs of a new type of crypto participant. With an eco-friendly Proof-of-Stake model paying out rewards to participants in the staking pool, we believe this token serves as an accessible tool to maximise potential in the crypto market. Holders can use the usual MetaMask or other Ethereum wallet to access staking.

An Engaged Community At The Heart

As a key differentiator, IOTA20 champions community engagement. We recognize the value of a united and thriving community, and we are committed to fostering an environment where knowledge-sharing, discussions, and collaboration flourish. Together, we'll forge ahead with a shared vision of technological agreement and financial freedom.

Tokenomics

IOTA20 gives everybody the chance to buy a familiar brand at a \$4 million market cap, more than 100 times less than the original IOTA's current market valuation of close to \$500 million.

If IOTA20 manages to reach the original IOTA's 2017 all-time high valuation of approximately \$15 billion, the token will have increased in valuation by around 3,900 times the presale price.

Total Supply: 2,779,530,283

Initial Market Cap: \$4,030,319

Fixed Presale Price: \$0.00145

Tokenomics 20

Presale (50%):

IOTA20 will have a total supply of 2,779,530,283 tokens - the same as the original IOTA. 50% of the total supply will be made available to the public at a fixed price of \$0.00145.

Staking (40%)

For long-term holders, 40% of the IOTA20 token supply is reserved for staking rewards, which are paid out to participants in the staking pool using the Proof-of-Stake method.

DEX Liquidity Lock (10%):

As a commitment to ensuring liquidity and stability, 10% of the total token supply will be allocated to the Uniswap liquidity pool. This allocation will be locked for 3 months.

Roadmap

Stage 1 - Presale:

To kickstart the launch of IOTA20, the presale will present an exclusive early buying opportunity for the general public. It is a crucial step in securing the initial funding necessary for the project's success. During this stage, active engagement with potential investors will take place to generate interest and anticipation for the upcoming token launch.

Stage 2 - Launch:

Following the presale, IOTA20 tokens will be distributed to both presale participants and the wider community. To ensure fairness and transparency, presale buyers will have to claim their tokens from the official IOTA20.com platform simultaneously with the Uniswap listing. The public launch of IOTA20 will then officially take place, with DEX liquidity added and locked for three months.

Stage 3 - Marketing:

The success of IOTA20 relies on effective marketing to raise awareness and attract a diverse audience. A comprehensive marketing campaign will be initiated, utilizing various channels such as social media and content creation. The focus will be on highlighting the unique value proposition of IOTA20, positioning it as an exceptional opportunity in the ever-changing crypto market.

Stage 4 - Staking:

The growth and sustainability of IOTA20 depends on building and nurturing a vibrant community. This stage involves engaging with supporters through exciting events and impactful initiatives. Key to this will be the ability for holders to easily stake their IOTA20 tokens and earn passive income over time. Staking will encourage more of the supply to remain locked, increasing the token's scarcity.

Disclaimer

IOTA20 is a new cryptocurrency with no affiliation to IOTA or any of its products. This token is a purely speculative asset that could go up in price or go to zero. Always do your own research.
